

Removing the Need to Assume

- ✔ Improve Patient Safety
- ✔ Make Cost Savings
- ✔ Avoid Cancelled Operations

Diateg – Diathermy Insulation Tester

The Diateg unit tests the insulation of diathermy instruments, reducing the risk of burns and 'Never Events' during surgery.

The Diateg unit detects the smallest of insulation failures including those not picked up in a visual inspection, ensuring the current does not arc through any compromised areas of insulation in the instrument.

The compact unit is easy and safe to use, and, unlike many other testers on the market, it is suitable for both coated monopolar and bipolar instruments and cables.

Benefits of Using Diateg:

-  Safeguard patients and staff from injuries and burns caused by faults in insulation
-  Ensure equipment is fit for purpose before surgery, avoiding cancelled operations
-  Prevent further damage to diathermy instruments through regular testing
-  Eliminate the need for using single-use diathermy instruments, saving on costs
