

Are Your Sealers up to Standard?

EM40 Entrhal Sealer

ISO 11607-2 requires users to monitor the following parameters of their pouch sealers: sealing temperature, contact pressure, sealing time, and sealing speed. This standard also requires the sealing process to be validated. In addition, the seals need to meet EN868-5 requirements for routine tests and documentation to ensure seal integrity meets the standards.

The EM40 Sealer is the tool you need to meet the requirements of both ISO 11607-2 and EN868-5.

Streamlined Processing

Integrated printer makes for a faster process

Small Footprint

Sealer unit takes up less space on tabletop

Sealer Replacement for Servicing

The sealer has a patented 'Serva-box' modular system, which means the internal mechanical unit can be lifted out and replaced for servicing needs, within a matter of 10 minutes!

Energy Cost Savings

Heat-up time of 1 minute – a third of that of other sealers

User Friendly

Simple touchscreen interface enables ease of use

Low Entry Lip

Allows for easy pouch feed

Highly Compatible

Reports output to USB, LAN and RS232

Easy to Clean

The lightweight unit is easily moved when cleaning sealing area
